

is proud to present

The Garrards Fly Catcher

for Big Fly Problems

The **Garrards Fly Catcher** is designed to eliminate flies, **without the use of harmful chemical sprays**. Each trap has a sachet of fly attractant provided. Once dissolved in warm water, the completely **natural organic attractant** activates within 24- 48 hours. The mixture starts to emit an odor irresistible to flies. They enter through holes at the top of the trap and once inside cannot find their way out. They eventually drown in the liquid. (See picture)

Using the **Garrards Fly Catcher** takes care of the immediate fly problem and prevents flies from breeding, thus reducing their population.

All instructions for use provided with the trap.
Replacement baits available.

Fly Facts

- Flies carry millions of harmful bacteria
- Flies have population explosions during warm, humid conditions
- Adult flies can live for 2-6 weeks and the female begins to lay eggs within 2 days of maturity
- Female flies can lay up to 100 eggs per batch and about 12-14 batches during its lifespan
- Unable to eat solid food, flies vomit on it to soften it up, then suck it back in again, depositing excrement on the food in the process
- Flies favor heat, light and low wind
