

# QuickBayt®

## Safety information.

When opening the container, preparing and using the prepared spray or paste wear cotton overalls buttoned to the neck and wrist (or equivalent clothing), a washable hat and elbow-length chemical resistant gloves. Wash hands after use.

### Testimonials

GAVIN MACARTHUR  
GM Pest Solutions  
Parkdale, VIC

"Bayer gave me a sample of Quickbayt sprayable to try – and asked me to "think outside the square" in regard to how to use the product to enhance our current Pest Control Practices."

#### 1. Flies in a catering warehouse.

This company site had 6 glue board fly trap units in the warehouse but still had a bad fly problem. I sprayed a small amount of QuickBayt® spray on to each unit and the results were amazing! Hundreds of flies on the glueboard and at the base of each unit. Customer was astounded!

#### 2. Vinegar Flies

Trialed in a large hotel, by spraying around drains and pipes in cupboard recesses. Immediate results. Hundreds of flies killed in a short period of time.

We also tried spraying the bait on a plastic A4 sheet - then slid the sheet under a till and a coffee machine in a bar. Results were again phenomenal, immediate attraction and kill of hundreds of flies.

DAVID LILLY  
Ecolab  
Silverwater, NSW

1. Measurement and mixing was achieved very easily and the product appeared to dissolve well after agitation (according to label directions).
2. QBS is very easy to apply and on most sites to date we have only needed our 5L B&G sprayers to obtain a targeted application and highly effective result
3. The main sites we have used QBS on are meat processing plants and, in particular, their waste handling areas. We have applied QBS around skips and bulk waste bins where offcuts, waste meat and leaking fluids have been attracting enormous quantities of flies that to date have been difficult to manage or control.
4. Speed of kill was within minutes and, after each application, flies were seen to be knocked down before we had even finished applying the QBS. Our site contacts were extremely impressed with the results and on some sites have contracted us to undertake additional services just for flies based solely on the performance of QBS.
6. QBS compares extremely favourably to other similar products both in terms of ease of use and also overall efficacy.
7. QBS will be a core product in our arsenal against flies for the forthcoming season.

### Bayer is committed to sustainable development

Various species of flies have been shown to be mechanical vectors of disease with the potential to contaminate foodstuffs and other material. Fly management contributes to prevention of food-borne diseases and also reduces waste of foodstuffs. QuickBayt Spray utilises patented attractant technology which reduces the number of surfaces which need to be treated in any given area. This not only reduces overall water use during the application process (compared to traditional residual sprays) but also reduces the number of surfaces which have insecticide on them. This leaflet is printed on 100% recycled paper using a waterless printing process and inks derived from vegetable sources.

This brochure is printed on FSC Certified paper made with Elemental Chlorine Free pulps (ECF), organic inks and using recycled water printing technology.

QuickBayt®  
spray

# Now flying with angels.

Attracts and kills flies fast  
Can be applied to both indoors and outdoors  
Use where traditional scatter baits cannot be used  
New water dispersible granule

# QuickBayt®

## Attracts and kills flies. Fast.

QuickBayt® Spray is a water dispersible granule which can be mixed with water and sprayed onto surfaces where it attracts and kills certain species of pest flies – fast! It can be applied to a range of different surfaces both indoors and outdoors (in areas out of reach of animals and children) to kill flies quickly on surfaces where conventional scatter baits can't be used.

There's no need to treat an entire area. Just apply QuickBayt® Spray over appropriate surfaces to attract and kill flies. Once they land and feed on the treated area they are controlled. An ideal product to use as a spot treatment around garbage bins and other refuse areas.

<b>Active:</b>	Imidacloprid 100g/kg
<b>Mixing rate:</b>	62.5g/500ml (spray), 62.5g/50ml (paint)

### Key features and benefits

Feature	Benefit
Wide use areas on label	Can be used indoors and outdoors
Sprayable solution	Can be sprayed on a variety of surfaces such as walls, posts, beams and ceilings
Unique activity of formulation	Excellent knockdown results (dead flies visible at time of application)- starts controlling flies in less than 60 seconds. Good residual activity- visible results are maintained for 4-6 weeks (depending on conditions)
Specialised attractants in formulation	This unique blend means that there is no need to treat such a wide area as conventional sprays (less time and water needed)

### Directions for use

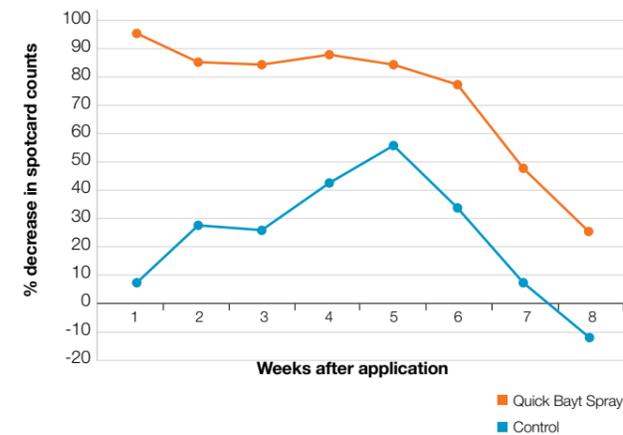

Spray	Paint
<ol style="list-style-type: none"> <li>Mix 62.5 g of QuickBayt Spray with 500 mL of water and apply as a course spray using a hand held sprayer to areas where flies rest.</li> <li>Maintain agitation of suspension during application.</li> </ol>	<ol style="list-style-type: none"> <li>Mix 62.5 g of QuickBayt Spray with 50 mL of water. Apply with a brush to spots where flies rest (e.g. walls, joists, window ledges, stable fixtures).</li> <li>It can also be painted onto pieces of timber, or sheets of cardboard or fabric which are hung in areas frequented by flies. Clean the brush in warm water after use.</li> </ol>

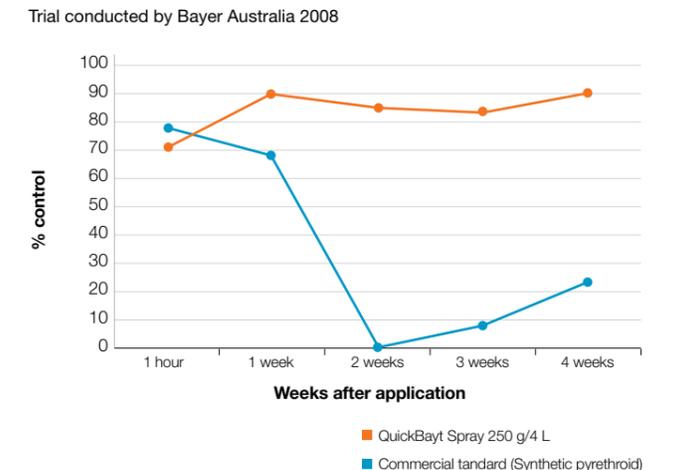

## Spray it where you need it most.

Thanks to the powerful attractants in QuickBayt Spray, you can transform practically any area in your operation into a fly-free zone.
