CLEAR OUT

PRODUCT RANGE

Product Guide

POWERED BY FIPRONIL

PRODUCT DETAILS

Product Name:	Clear-Out Crawling Insect Aerosol
Active Constituent:	0.6g/kg Fipronil
Formulation type:	Aerosol
Target Pests:	Apply as a residual surface crack & crevice or spot treatment for control of COCKROACHES AND ANTS where these insects are likely to rest, harbour, live and breed. On surfaces, spray as a residual or spot treatment application up to but not exceeding the point of run off

Uniqueness: Non-repellent residual active ingredient with quick knockdown leaving a fipronil residual

CLEAR OUT CRAWLING INSECT AEROSOL BENEFITS

- Precise, simple and convenient to use aerosol spray containing Fipronil.
- User friendly with no chemical decanting or mixing reduces contamination
- Perfect for tight cracks and crevices with the flip up nozzle straw
- Suitable during inspection or treatment saving time
- Designed for professional pest managers
- Easier to control spray volume which avoids overspray onto sensitive surfaces

Application Tips for Commercial Kitchens

- It's best to treat after cleaning so your efforts are not washed away
- Arrange to have access panels removed
- Crucial to get inside machinery and equipment, wherever possible (do not apply near open flame – use Clear Out Crawling Insect Powder)
- Get to where the cockroaches are hiding. Don't forget hollow legs of benches, & stoves, inside dishwashers, bain maries and pipe & cable housing
- Get behind doorjambs, corner scuff plates, splash guards behind sinks, underneath bench tops, etc.

CLEAROUT CRAWLING INSECT AEROSOL IS THE WORLDS FIRST OIL-BASED AEROSOL CONTAINING FIPRONIL TARGETING COCKROACHES AND ANTS

PRODUCT DETAILS

Product Name:	Clear-Out Crawling Insect Powder
Active Constituent:	5g/kg Fipronil
Formulation type:	Powder
Target Pests:	Crawling Insect Powder – can be used to treat ant Infestation in hard to reach areas. The dust will flow deep into cracks and crevises and will cause little to know disturbance. The powder can be used in and around electrical areas targeting cockroaches and ants.

Uniqueness: Non-repellent residual active ingredient together with a cellulose based food. Designed to flow deep into cracks and crevises leaving a fipronil residual

CLEAR OUT CLAWLING INSECT POWDER BENEFITS

Stage 1

- Referred to as the DIRECT KILL STAGE – Fipronil crystals are picked up by foraging cockroaches. Fipronil crystals stick to the exoskeleton and are absorbed through the soft tissue.

Stage 2

- INDIRECT KILL STAGE – Dead cockroaches are cannibalised by the existing population spreading the Fipronil throughout the colony.

Stage 3

- NYMPH KILL STAGE – nymphs are highly attracted to the regurgitation that Fipronil infected Adult cockroaches leave. Nymph control is achieved through natural feeding activity.

Application tips for commercial kitchens

- It's best to treat after cleaning so your efforts are not washed away
- Arrange to have access panels removed
- Crucial to get inside machinery and equipment, wherever possible, motors and electrical boards.
- Get to where the cockroaches are hiding. Don't forget hollow legs of benches, & stoves, inside dishwashers, bain maries and pipe & cable housing
- Get behind doorjambs, corner scuff plates, splash guards behind sinks, underneath bench tops, etc.

PRODUCT DETAILS

Product Name:	Clear-Out Cockroach Gel Bait
Active Constituent:	Fipronil 0.5g/kg + unique food matrix
Formulation type:	Gel bait
Target Pests:	Apply as a spot treatment for the control of cockroaches.

Uniqueness: Powered by non-repellent Fipronil active ingredient. The unique food matrix has been formulated to encourage cockroach feeding in particular with German Cockroaches in sensitive situation like food production & preparation areas.

CLEAR-OUT COCKROACH BAIT BENEFITS

- Formulations have to be palatable for cockroaches to consume. Cockroach adults and nymphs consume Clear Out Cockroach Bait directly due to the highly palatable bait matrix
- Baits exploit natural cockroach behaviour of exchanging food and excretions with each other (trophallaxis). Clear Out Cockroach Bait is passed onto other adults & nymphs within the cockroach population
- Nymphs are highly attracted to the regurgitation that Fipronil infected adult cockroaches leave. Additional nymphal control is achieved through this natural feeding habit.
- Cockroaches cannibalise their dead and ingest more bait with the dead cockroach

Application tips for commercial kitchens

- Look for sources of food, water and heat when treating for German cockroaches. – areas like refrigerator compressors and fan motors.
- Apply bait to cracks and crevices or where cockroach activity has been observed. Hot spots are between and under cabinetry or where sinks meet the wall.
- Investigate wall hangings like clocks pictures etc. Apply multiple small dots of bait in the area
- Investigate small and large appliances. Check fridge door seals. Apply multiple small dots to the area if cockroaches are found.
- Wall voids are also a good hiding spot for cockroaches. Apply bait to the pipe seals entering the walls or floors.
- Investigate areas constructed of hollow tubing. These areas serve as a good hiding spot along with wheel rollers and gas oven knobs. Treat these areas with multiple small dots of bait.

PRODUCT DETAILS

Product Name:	Clear-Out Drain Foam
Active Constituent:	Contains a concentrated mix of natural microbial spores which when activated, digest bad bacteria
Target Pests:	Eliminates, prevents & guards against the build-up of scum, mould & other decaying organic matters in drains and other areas. Eliminating the BIOFILM (removing the source) reduces the potential harbourages and breeding sites of insects such as drain flies and cockroaches.

APPLICATION: Apply the ready to use foam to all surfaces where flies may land, including sump drains behind bars, under bar-top drink dispensers, etc to sanitise the surfaces and prevent bacterial growth. Direct application to drains is quickly and easily achieved by inserting the flip up straw. Inject the foam for a few short seconds or until the foam reaches the drain level.

A REVOLUTIONARY PROBIOTIC BASED FORMULATION FOR EFFECTIVE MAINTENANCE, REDUCTION AND SANITATION OF DRAINS TO CONTROL DRAIN FLIES & COCKROACHES

CLEAR-OUT DRAIN FOAM BENEFITS

- Clear-out is also suitable for use on carpets and soft furnishings
- Fully biodegradable
- Safe for use in septic systems
- Eliminates food source required by drain flies
- For domestic, commercial & industrial use
- Australian made & owned
- Natural mould on odour control product
- Helps remove the food source and biofilm breeding medium required by drain flies, cockroaches and ants.
- Actively breaks down organic matter that causes blockages and odours in drains & grease traps.

CLEAR OUT

THE INTEGRATED APPROACH

Just like pest control in general, successful eradication can only result from an integrated approach. The 'integrated' term is applied concurrently to two separate parts of the pest management equation.

1. The integration between the main stakeholders (Client & Pest Manager) playing their respective parts. The education of and communication with the client may well contribute as much benefit to managing a cockroach infestation as the actual treatment itself. The client may need to:

    - Improve cleaning and sanitation – give advice, you're the professional (change the culture where needed)
    - Inspect incoming produce and create an inspection / quarantine area (prevention is better than cure)
    - Proof off and seal pest entry and harbourage areas (exclusion may avoid a future infestation)
    - Rotate incoming stock first in - first out
    - Improve warehousing & storage practices (create access for inspection, cleaning & treatment)
    - Create a documented regular cleaning & maintenance schedule (this will enhance your efforts)

2. The integration and combination of various pest control procedures, actions, methods, technologies and products

    - Thorough inspection
    - Correctly identify the pest
    - Find the source (location of breeding and harbourage sites)
    - Remedy contributing factors with client (cultural, housekeeping, maintenance, proofing, competing food sources)
    - Establish suitable treatment methodology by selecting appropriate products & formulations. Combine and integrate direct and indirect (non-chemical, monitoring, baits & insecticides) treatment methods
    - Record & document
    - Minimise re-infestation with effective follow-up & reinforce IPM with customer education

Ideal products to combine as part of an 'Integrated Approach' are:"

✓ **Clear Out Crawling Insect Aerosol**

✓ **Clear Out Crawling Insect Powder**

✓ **Clear Out Cockroach Bait**

✓ **Clear Out Drain Foam**
