

PRACTICALITY FEATURES

- Maki Block has a central hole for securing inside bait stations and preventing bait dispersion outside the station
- High number of baiting points: 375 blocks/bucket
- Square bucket of 7.5 kg

SAFETY FEATURES

- Bromadiolone is an anti-coagulant. Antidote Vitamin K1 is effective in case of children or pet poisoning
- Maki block contains Bitrex, a bittering agent that prevents the risk of consumption by children or pets

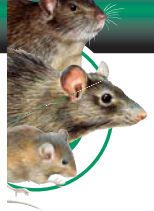

- Widely used in Europe and the US, Maki block is considered the reference maintenance block overseas
- Extensively tested both in cage conditions and field situations, trials have been run both in Australia, NZ and in the Northern hemisphere
- Recognised immediately by food safety auditors

MAKI® BLOCK

YOUR EVERYDAY RODENT BAIT

- Highly weather resistant
- Highly mould resistant
- Strong palatabililty & efficacy

50 ppm bromadiolone
20 gr block

BEST USED:

- In commercial accounts with ongoing baiting programs
- Also in places with high humidity content or during hot weather: in and around buildings
- Alternative to more toxic AIs (ie where secondary poisoning may be an issue)
- Xoxoxoxoxo xoxoxox

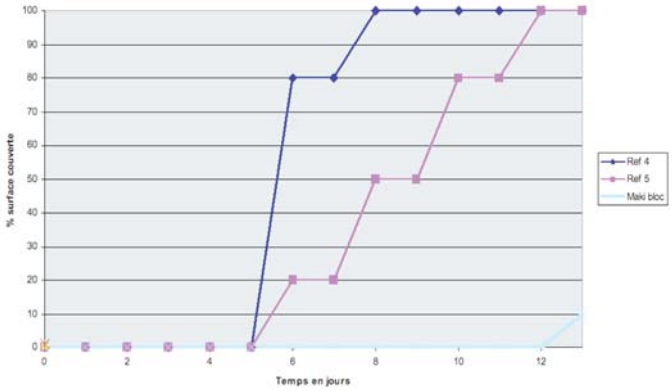

LIPHATECH

ABSOLUTE WEATHER AND MOULD RESISTANCE

- **Has been tested until 54 °C and does not melt**
- **Prolonged mould resistance. Up to 3 months in field-situations**

LABORATORY TRIAL – LIPHATECH R&D CENTER

Evolution in % of the surface covered with mould over 13 days
(HR : 90 %, T °C : 30 °C)

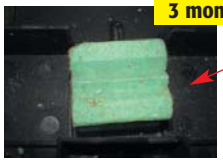

FIELD TRIAL

MAKI BLOCK — **DAY 1** — Ref. 4

3 months later, 7 °C and 75 % hum.

No mould

Mouldy

(moulds from Day 36)

3 months later, 15 °C et 87 % hum.

No mould

Mouldy + Insect development in the block

Tests run in a dairy factory with:
7 °C and 75 % relative humidity
15 °C and 87 % relative humidity
(ie: baiting 12 Jan 2007 and assessment 03 April 2007)

HIGH EFFICACY & PALATABILITY

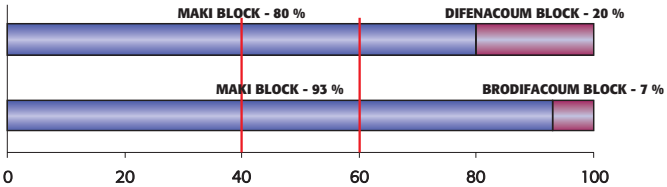

BROMADIOLONE, SINGLE FEEDING ACTION FOR RATS & MICE

- **Developed by LIPHATECH, the inventor of Bromadiolone**
- **Versatility of the AI: efficient on rats and mice**

LIPHATECH MANUFACTURING PROCESS AND PALATABILTY:

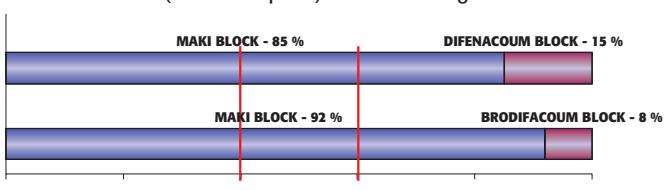

- **Use of high food-grade ingredients in the formulation to enhance the palatability**
- **Shape: Multiple edges to encourage feeding, adapted to rodent gnawing habits**
- **Green dye helps to detect bait consumption in the excrement**

Comparative palatability of Maki Blocks against other baits
(% consumption) - Mus musculus

Between red borders: No difference of acceptance between the two baits if results are between 40 % and 60 %
Under 40 %: less palatable // Above 60 %: more palatable

Comparative palatability of Maki Blocks against other baits
(% consumption) - Rattus norvegicus

⇨ **Outperforms most competitor products in comparative trials**
