FRUIT FLY TRAP + LURE

The NextGEN FFT (Fruit Fly Trap) is designed to capture fruit flies in commercial, residential and industrial premises such as bakeries, groceries, restaurants, domestic premises and similar locations. The FFT can be used as a way of monitoring the presence of fruit flies. The FFT is designed to lure adult fruit flies and is the perfect tool for mapping infestation levels.

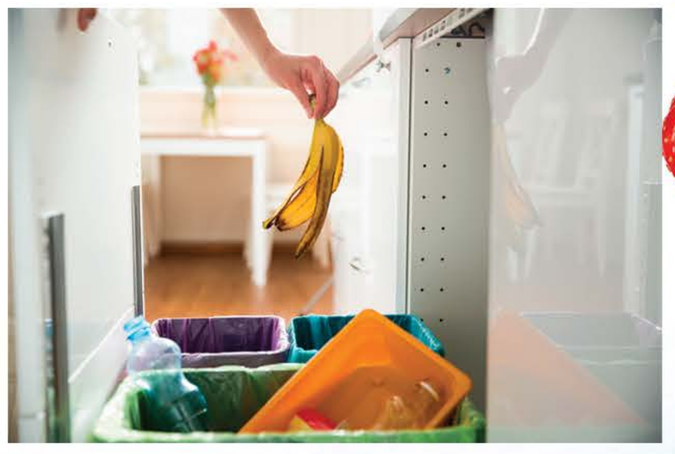

The FFT is most effective when placed near breeding sites. This can be under bars, beverage centres, dishwashers, food displays, food preparation areas and other locations where fruits are stored or used.
