FACT SHEET

Storm® Secure Wax Block rodenticide

Whole grain-based palatability, combined with the durability and securability of a compressed block.

Storm Secure Wax Block Rodenticide brings one of the most effective and powerful anticoagulant rodenticides to rat and mouse control. The high potency active ingredient in Storm Secure only takes a single feed for rodents to consume a lethal dose, providing fast and reliable control.

Storm Secure is formulated as a cracked cereal grain block with a low wax content, ensuring exceptional palatability and stability are maintained under hot and cold conditions. Storm Secure has also been developed using BASF's patented Fortec® Technology, ensuring feeding preferences for rats and mice are met in a single palatable formulation.

Storm Secure also contains a unique fungicide which minimises fungal growth in damp and humid environments. Whether developing a long-term baiting program or cleaning out a site from a severe infestation, Storm Secure provides an effective solution you can rely on.

Features	Benefits
Proven single-feed efficacy providing rapid control	The power of Storm Secure means it only takes a single feed for both rats and mice to consume a lethal dose, giving fast and reliable control in any situation.
Excellent palatability	Storm Secure is formulated using BASF's patented Fortec® Technology which combines cracked cereal grain with other human feed grade ingredients into a low wax content compressed block that is extremely palatable to rats and mice. The palatability of Storm Secure together with the proven power of the active ingredient, means rats and mice will rapidly consume a lethal dose even in the presence of other attractive feeds that are readily available.
Highly durable and securable block	Storm Secure is formulated into an extremely durable block, resisting both extreme temperatures, moisture and mould. The central hole allows for firm anchoring within bait stations and prevents removal and relocation by rodents, reducing the risk of consumption by non-target species.
Fits perfectly into a pulse baiting strategy	Storm Secure can be used in the most cost-effective pulse baiting program by reducing the amounts of bait put down in successive cycles. This ensures the most reliable population control by allowing less dominant later feeding rats and mice sufficient access to the bait once their more dominant early-feeding contemporaries are dead or dying. As well as requiring less bait than the traditional surplus baiting regimes employed with multi-feed rodenticides, pulse baiting significantly reduces both the amount of bait needed and the time required for baiting, leading to total treatment cost savings.

Storm® Secure Wax Block

Rodenticide

Application

Storm Secure can be used strategically with BASF's entire rodent control range including Storm Soft Bait and Selontra Soft Bait, providing the most superior, unique and comprehensive, cleanout, rotation and resistance strategy for all situations.

SITUATION	PEST	CRITICAL COMMENTS
In and around industrial, commercial, agricultural and domestic buildings.	Rats	Select suitable bait locations, such as within active rat holes, along runs and under rubbish. Try to establish a barrier of bait locations between living and feeding areas. Secure 3 or 4 Storm Secure blocks at each bait location on wire or nails, or inside rat bait boxes. Place 1 or 2 baits in each rat hole. Inspect the bait locations after 3 days and select new locations where there has been no take. Inspect again 4 days later and replace eaten blocks. Repeat bait station inspections at 7 day intervals, replacing fresh blocks only when blocks have been eaten, until all signs of rat activity have disappeared. Normally only 3 to 4 baiting rounds (pulses) are required.
	Mice	Mice have very limited home ranges and do not need to drink. They are more difficult to control than rats due to more erratic feeding patterns. Therefore selection of bait locations is even more important. Secure 1 or 2 Storm Secure blocks on wire or nails, or inside mouse bait boxes 2 metres apart in areas where activity is obvious, particularly where droppings are seen. In domestic premises, secure 1 to 2 blocks on wire or nails or in mouse bait boxes, in sheltered positions, inaccessible to children and pets, where mice are active such as under flooring, inside ceiling cavities, along pipe runs and conduits and behind skirting boards, furniture and appliances. Inspect bait locations and replace blocks as for rats until all signs of mouse activity have disappeared.

Packaging

Available in 500g, 3kg and 8kg buckets
