Moth catcher

Moth catcher

A sturdy, waterproof plastic trap for moths, designed to make monitoring of key moth pests simple and efficient. The yellow sticky liners and bottoms, which are also available, ensure that pests caught stay trapped and can be easily removed. The moth catcher can be used with the Xlure 4Seasons or PE Lure when monitoring food moths.

Benefits

- Durable permanent trap designed for long term monitoring of stored product moths
- Can be placed in a grid formation throughout a building to keep moth populations low.
- High capacity to hold hundreds of moths
- Waterproof and efficient in dusty areas
- Replaceable liner coated in non-drying glue
- Shaped yellow liner proven to add visual attraction to the trap
- Slow-release, long-life pheromone dispenser is sealed in a foil pouch to ensure efficacy and non-contamination
- Insecticide free and non-toxic
- Cap and cage provided for lure placement
- Liners and lures can be purchased separately

Target insects

Indian meal moth
Plodia interpunctella

Mediterranean flour moth
Ephestia kuehniella

Tropical warehouse moth
Ephestia cautella

Warehouse moth
Ephestia ellutella

Russell IPM
INTEGRATED PEST MANAGEMENT

Where to use

Food processing plants, manufacturing plants, food storage facilities, retail pet stores, homes, kitchens, hospitals and nursing homes.

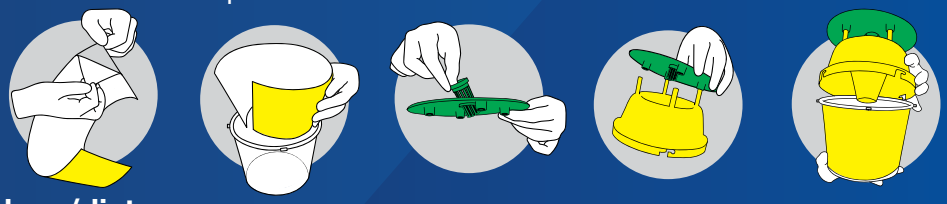

Application method

Assembly

Remove the protective paper from the back of the liner with the sticky side facing inwards in the moth catcher. Remove lure out of packaging and secure in the cap and cage. Attach the cap and cage to the top of the moth catcher lid. Line up lid with moth catcher bottom and turn to secure together. When using a moth catcher sticky base, remove protective paper and place sticky side up inside the bottom of the trap.

Where to place/distance

The trap is a tool that should be used as a permanent part of an integrated pest management programme in large areas. Only the lures and liners need to be replaced. Secure in a grid formation throughout the building to ensure optimum monitoring. One trap every 100 square metres will provide enough coverage, however additional traps can be used in heavily infested areas.

Replacement

Replace lure every 13 weeks and liner every 6-8 weeks unless the trap is full earlier.

Storage

The lures and liners should be stored in their sealed packaging, in a cool dry place for a shelf life of 6 months. If longer storage is required, store in a fridge or freezer.
