Pheronet

Pheronet
Clothes moth

A discreet, pre-baited sticky trap that monitors and detects moth activity at an early stage in order to prevent infestation. Successfully used in a large census for data capture of moth infestations in homes around the country, this trap is effective for monitoring the Webbing-cloths moth *Tineola bisselliella*, and the Pale-backed clothes moth *Monopis crocicapitella*.

Benefits

- Precision dosed pheromone for insect attraction, pre-baited in non-drying glue
- Detects moth activity at early stage to prevent infestation
- High quality cardboard
- Ready to use
- Insecticide free and non-toxic
- Versatile, small, compact trap for use in tight spots or areas where monitoring should be inconspicuous
- Can be used to monitor specific areas of infestation e.g. focus monitoring around furniture or in wardrobes

Target insects

Casemaking clothes moth
Tinea pellionella

Pale-backed clothes moth
Monopis crocicapitella

Webbing-cloth moth
Tineola bisselliella

Russell IPM
INTEGRATED PEST MANAGEMENT

Where to use

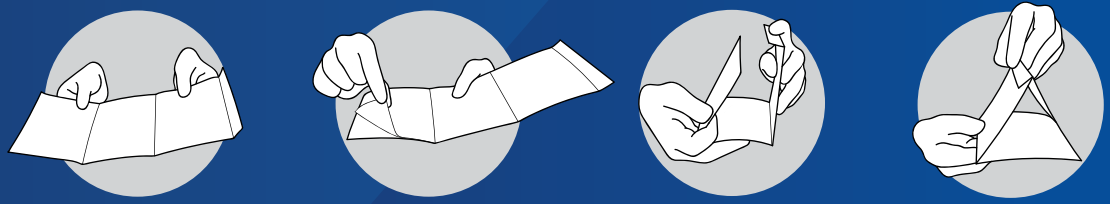

Homes, apartments, museums, retail clothing warehouses, clothing manufacturers, textile and carpet retailers.

Application method

Assembly
Remove protective paper, fold the trap into a triangle and secure with the tab with glue patch. As the trap is pre-baited no lure is required.

Where to place/distance
In a small area, e.g., wardrobe, one trap will be sufficient. In a larger area, place one trap every 25 metres squared. When trying to pinpoint infestations, more traps can be used. Place additional traps around fittings and equipment if needed, making sure they are still placed where they can be inspected easily. The trap can be hung or placed on a flat surface.

Replacement
Replace trap after 12 weeks unless full earlier.

Storage

The traps should be stored in their sealed packaging, in a cool dry place for a shelf life of 12 months. If longer storage is required, store in a fridge or freezer.
