Why homeowners trust Termidor

Over the last 21 years, more than 400,000 homeowners have put their trust in Termidor, without a single product failure. Termidor is Australia's number one trusted brand for termite control and provides long lasting treatment for at least eight years.

Termidor also comes with a Termidor Assurance Warranty that covers your home for structural damage of up to $2 million to give you peace of mind for your most valuable asset.

Which Termidor treatment should I use?

BASF have a range of termite products that are highly effective in treating termites – that can be used in combination or on their own. To find out which termite treatment is best for your home, consult with an Accredited Termidor Professional.

Why is Termidor so effective?

Termidor uses advanced BASF technology known as the Genuine Transfer Effect™. This unique non-repellent technology means that termites can't detect Termidor, so they can pick up a lethal dose while foraging in treated areas and return to their colony to pass it on to other termites. This then successfully eliminates the entire colony and treats the root cause of the problem, rather than killing only a few individual termites.

As a result, Termidor works quickly and more effectively than other inferior termite control options.

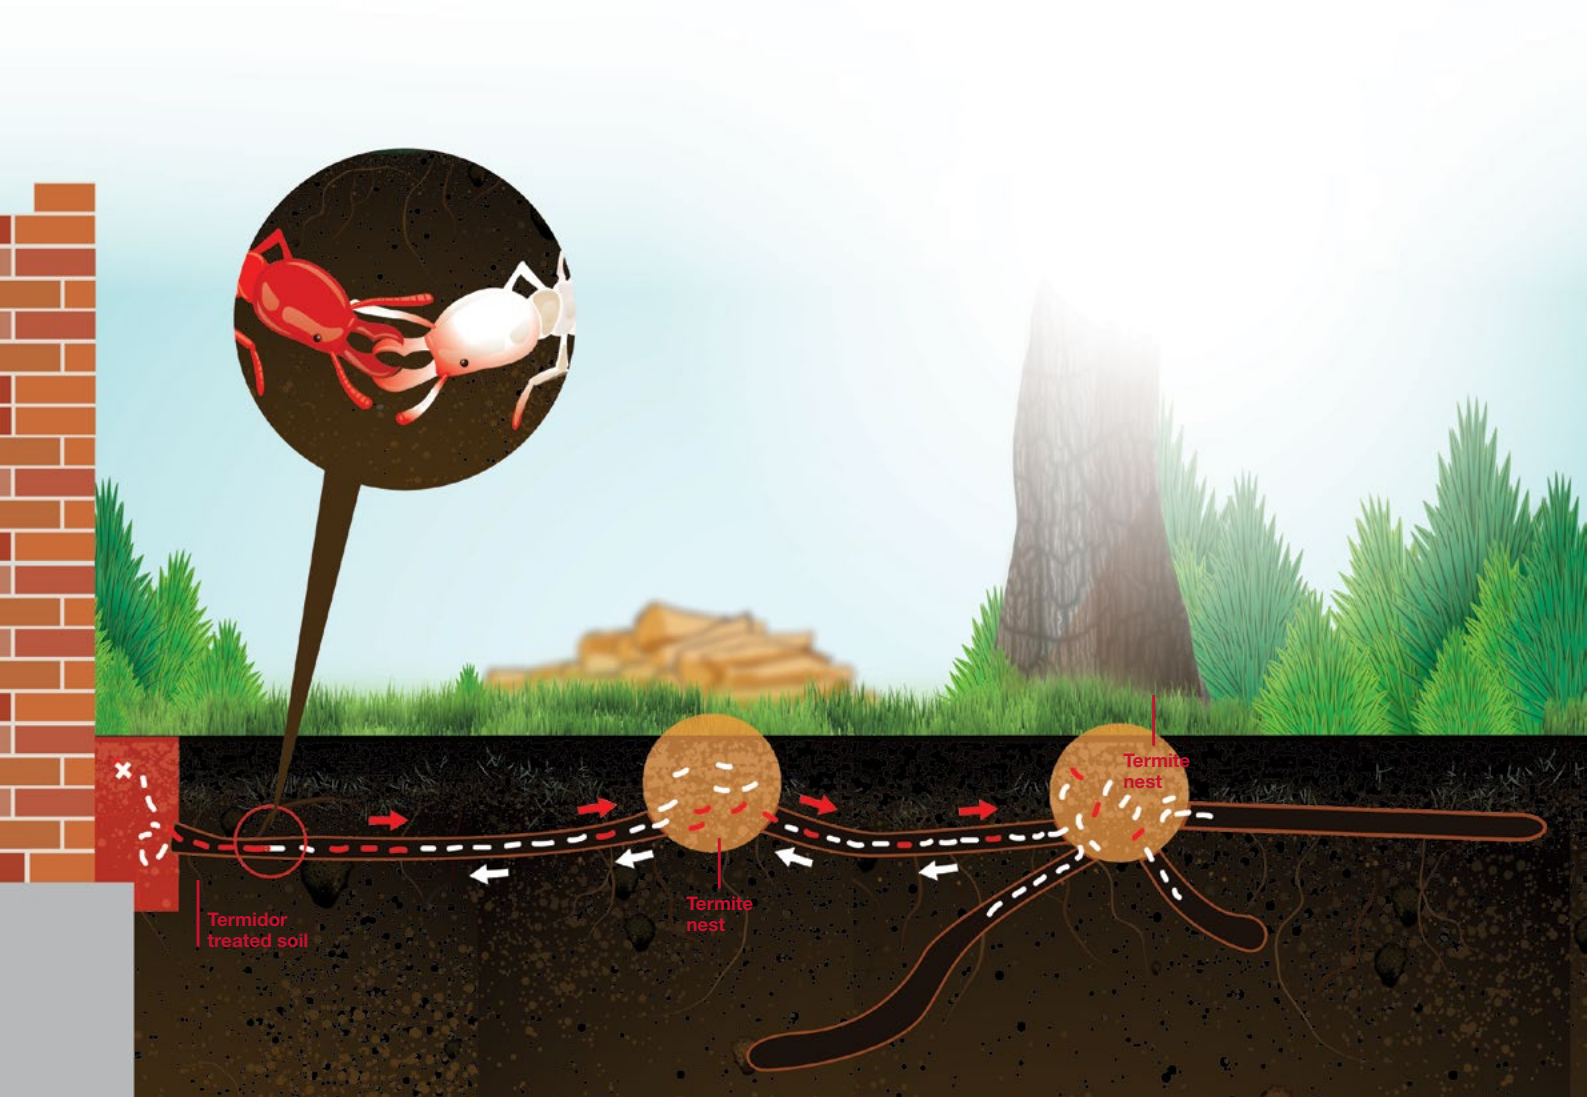

Termidor® Residual

Termiticide & Insecticide

Termidor Residual
The original termite solution

Termidor Residual Termiticide and Insecticide provides the most superior levels of control against termites, as well as a range of other pests, including ants, cockroaches, spiders, and flies. Termidor has been developed with BASF's advanced non-repellent technology, providing significant advantages over other inferior insecticides.

Termidor's unique Transfer Effect™ ensures the powerful active ingredient can be passed effectively throughout the nest, ensuring that termites continue to interact with the insecticide without detection or disruption in behaviour. This results in unmatched levels of efficacy, long term residual control and treatment that works the first time around.

Termidor HE
The most advanced termite protection yet

In 2017 BASF introduced Termidor HE ‘High Efficiency’ termiticide, the next step in termite treatment following Termidor Residual. Termidor HE is an advanced termite protection solution, which allows the establishment of uniform and consistent termite protection for your home, whilst reducing the risk of damaging the aesthetics of your home.

Next level effectiveness

Termidor HE is an advanced formulation of the same extremely powerful active ingredient that has made the original Termidor products the most trusted and effective termite treatments.

Termidor HE spreads much further through the soil than older treatments to create a more even and effective protective zone which termites cannot avoid.

Termidor HE binds strongly to organic matter in the soil and, as long as the soil isn’t disturbed, stays in place for years. So it’s not just superior protection at the start, it goes on providing the highest level of protection year after year.

Conventional treatments have very limited movement through the soil and can be unevenly distributed within the protective zone.

Termidor HE spreads through the soil to create a deep, invisible, even and unbroken protective zone all termites are affected by.

Termidor® HE

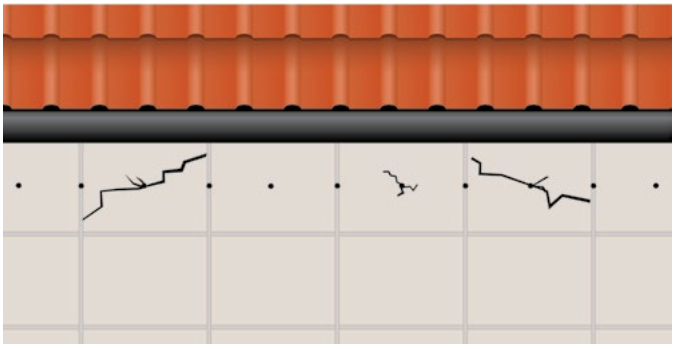

Residual Termiticide

Next level convenience

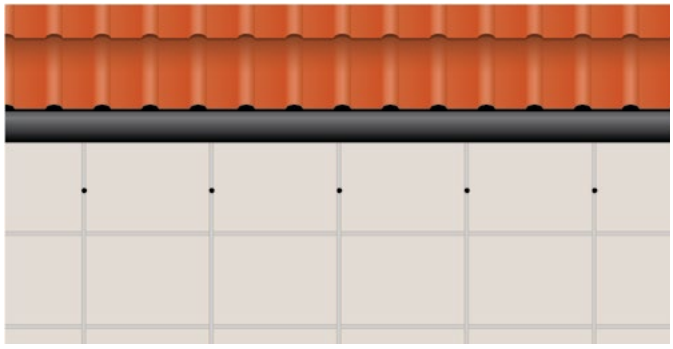

The advanced technology in Termidor HE gives your Accredited Termidor Applicator more scope to provide a superior treatment, without cutting corners or disturbing the structure and damaging the aesthetics of your home.

The increased movement of Termidor HE through the soil means it is unlikely that you will be required to drill through tiles, and that treatment won't be compromised by obstacles like underground pipes.

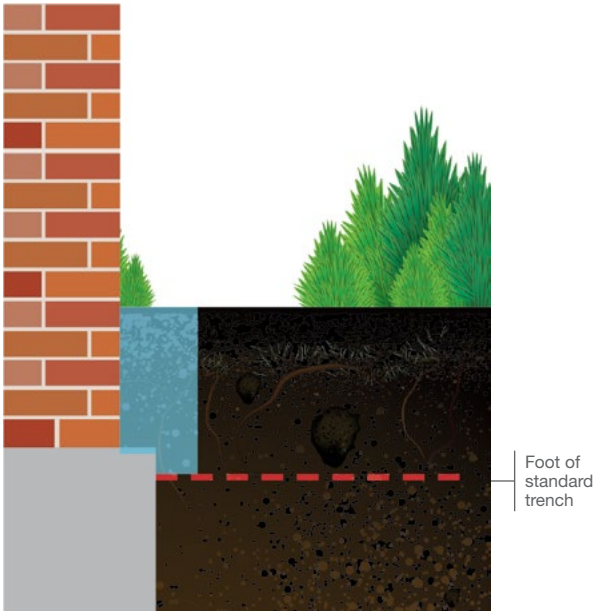

The end result is a more effective protection zone that can leave your home looking just as it did before providing a more convenient solution for you and your family.

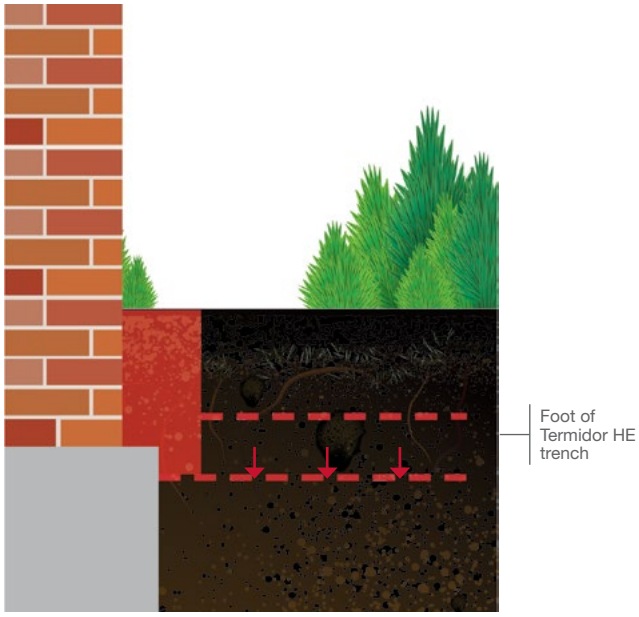

When holes need to be drilled for treatment beneath outdoor or indoor surfaces, the smaller spaces required between standard treatment application sites can result in unsightly disruption and damage.

Termidor HE allows for application sites to be placed in more discreet areas (such as grout lines), which means a thorough treatment can be performed with minimal visual impact and risk of damage.

Conventional treatments require significant trenches to be excavated well below the footing. The trenches are then backfilled with treated soil to form the protective zone. This large scale excavation can lead to significant disruption and damage to landscaped areas.

Termidor HE is applied in shallower trenches. Advanced polymer technology then allows its active ingredient to spread down and form a protective zone that is at least as deep as standard treatments provide. This results in a superior treatment with less disruption and damage.

What is involved in termite treatment?

1. An Accredited Termidor Applicator conducts a thorough inspection of your property. If termites are found, Termidor Foam will be required to quickly stop activity within your home.
2. A trench will be dug around your home in preparation for the Termidor application.
3. Termidor will be applied to the soil as it is back filled.
4. Holes are drilled through paths and concrete areas or concrete is cut away to gain access to the soil.
5. Pavers, if not concreted in, must be lifted, the soil treated underneath and the pavers re-laid.
6. Some soils, such as heavy clays, may be removed and replaced with a sandy loam before treatment.

We highly recommend a follow up visit from your Accredited Termidor Applicator. Ongoing inspections of your home and surrounds at least every 12 months, and more frequently in high-risk situations, are recommended.

Taking termite control to the next level
