BLACK UREA™

A carbon coated improvement over granular urea, that increases grower value by reducing nitrogen losses. The unique carbohydrate and mineral coating bonds to the ammonium ion to stabilise it chemically and biologically and reduce the opportunity for it to react with other soil elements in a negative manner. The resultant stable nutrients are made available to the plant by plant root exudates and microbiology interaction in a time frame controlled by the plants needs.

GUARANTEED MINIMUM ANALYSIS

Nitrogen	**45%**
Carbon	**21%**
