NEW

# THE BLUE Delicacy

## FOR RATS AND MICE

5 kg plastic pail contains 50 x 100 g sachets

### NEW formulation for Pest Managers

- highly effective against rats and mice ✔
- suitable for indoor and outdoor use ✔
- highest palatability ✔
- easy application and handling ✔
- can be used in dry or damp conditions ✔
- biodegradable ✔
- no bait shyness ✔
- AQIS approved ✔

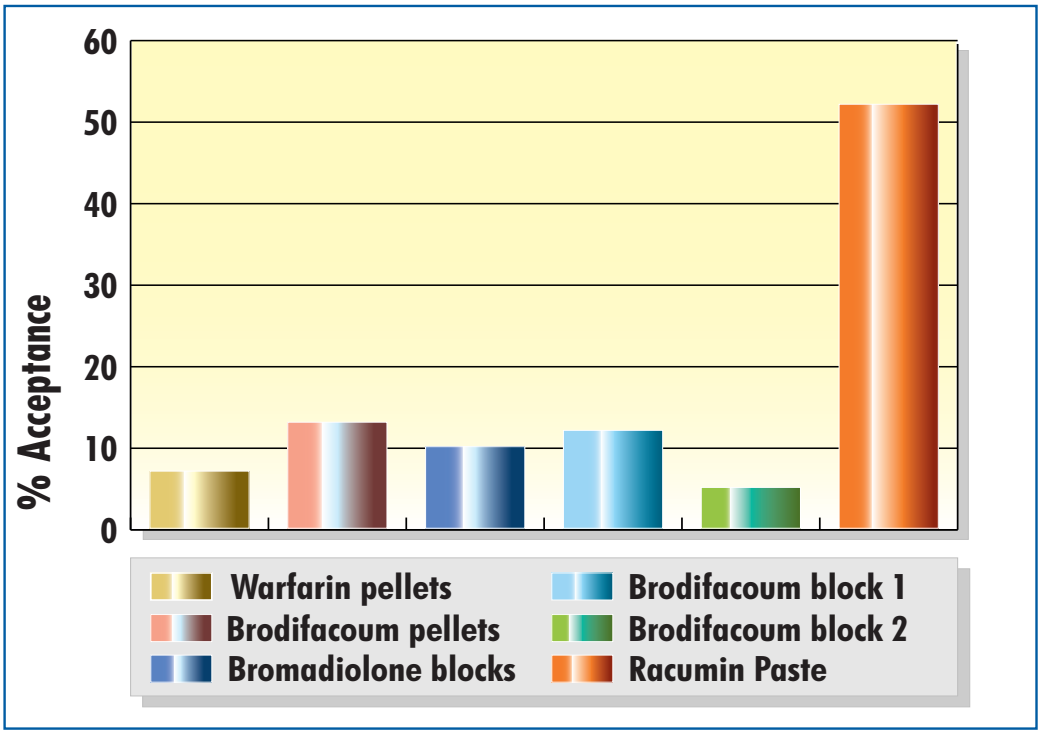

**Racumin Paste is the new, highly effective, universally applicable rat and mouse bait from Bayer with the most advanced first generation anticoagulant Coumatetralyl.**

# Racumin® Paste

## Highly palatable and very effective

Racumin Paste contains the active ingredient coumatetralyl from Bayer at a concentration of 0.037%, just like other Racumin formulations. So what makes Racumin Paste different ? Vegetable fats and carbohydrates are combined in Racumin Paste in a way that is exceptionally attractive to rats and mice. This results in extremely high acceptance of Paste giving excellent results. Racumin Paste works by preventing blood coagulation, causing death between 3 to 8 days after the intake of a lethal dose, due to internal bleeding. Is it a single dose or multiple dose? Many rats and mice take in the lethal dose during the first day of feeding which makes Racumin Paste highly effective. The well known environmental benefits of first generation anticoagulants are maintained; the "single dose" lethal effect is primarily achieved by palatability and not by high toxicity.

## Palatability of various rodenticides
### on Australian market

Laboratory studies have shown Racumin Paste to be up to ten times more palatable than other rodenticides.
