Introducing HomeGuard® GT

Another valuable component of

HomeGuard®
Precision Termite Management

HomeGuard® GT is a pro-active, granulated termite barrier that further complements the existing HomeGuard Precision Termite Management Systems.

HomeGuard® GT, an APVMA registered product, kills termites on contact and is designed to keep working for the life of the building.

The black granules fill construction voids of any size or shape. Ideal for corrective situations **HomeGuard® GT** provides installers a tool to fix those unexpected issues that arise in real life situations when installing a physical termite barrier.

From filling cavity voids, moving service penetrations, to a full perimeter cavity fill, **HomeGuard® GT** is an essential component of the total HomeGuard Precision Termite Management System.

Available in easy to carry, 15KG bags, it will not leach and is kind to the installer and environment. When used in combination with the other HomeGuard components a HomeGuard® warranty* applies.

HomeGuard® GT makes other granular termite barriers obsolete!

HomeGuard warranty is limited and conditions apply. Contact FMC on 1800 066 355 for full details.

Questions and Answers on HomeGuard® GT

Where can HomeGuard® GT be used?

Any construction voids where protection is required from attacking termites. From full perimeter cavities, plumbing voids, construction joints and electric conduits etc.

Are there any cavity size restrictions?

HomeGuard® GT can be used in any construction void, no matter its size or shape. Unlike the older passive granular barriers it does not need to be compacted. An inexpensive cover strip of HomeGuard Blue or DPC completes the installation.

Is HomeGuard® GT covered by FMC's warranty?

Yes! as long as the product is installed with the other HomeGuard components in accordance with the registered label, and meets FMC's warranty terms and conditions

Can I use HomeGuard® GT to move a penetration?

Yes! the registered label and installation manual both allow this use.

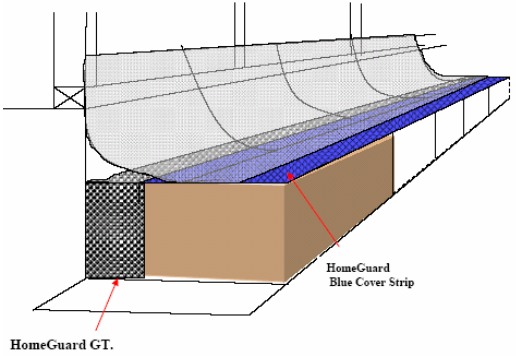

How long will HomeGuard® GT last?

Like all HomeGuard products, HomeGuard® GT uses advanced impregnation technology that locks the termiticide into the granule for the design life of the building. It does not need topping up or recharging.
