HydraSoil®

Pack size: 5L, 20L, 200L

- Improves water uptake in non-wetting soils;
- Specially formulated to reduce nutrient leaching;
- Enhances the uniform application of soil applied pesticides while reducing run-off;
- Improves seed germination in non-wetting sands;
- Reduces soil erosion.

GENERAL NOTES

Hydrasoil is a specially formulated soil wetting agent designed to improve water penetration into water repellent soils. Its unique design maximises water uptake without causing excessive movement through the soil profile. This reduces the problem of nutrient losses or nutrient leaching away from the plant root zone.

APPLICATION RATE

Hydrasoil is applied either by boom spraying or can be spot treated or band treated. Once applied, Hydrasoil should be washed off the leaf surface as soon as possible and drenched into the soil.

TANK MIXES

Hydrasoil is only compatible with pesticides or fertilisers that need to be drenched into the soil. DO NOT apply with products that must persist on, or near the soil surface.

SITUATION	DOSE RATE	COMMENTS
Turf	250ml/100m^2	Apply every 4-6 weeks during late spring and summer.
Pot Plants / Gardens	2ml/L	Drench into pots or apply to media before transplanting. Top ups may be needed every 6 weeks.
Broadacre sowing	500ml/ha in 60-100L water	Apply at seeding with trailing wetting agent applicator mounted behind a furrow sowing combine.
Pest Control	5ml/L	Add to soil drenched pesticides for better distribution throughout the targeted area.
