Technical Data Sheet

Product:

Wasp Pro/ Wasp and Fly Lure.

Code:

CAT-F10/ CAT-F11

Description

The Wasp and Fly Lure is a food attractant based on natural stimulants for Wasps and Flies. Once the insects have been drawn into the trap, the Wasp Pro's funnel shape contains them within the trap. The Wasp Pro trap is made of a translucent polypropylene top, bright yellow base and green string for hanging.

Longevity: Remains attractive for up to 2 weeks. Clean the trap and refill after this time or when the trap is full with wasps/flies. The trap is most effective during Summer/early Autumn.

Where to use: Intercept wasps from entering buildings by placing the trap close to doors or windows. Protect an outdoor seating area, i.e. be hung 4-5 meters apart around a patio area to prevent wasp entry.

Application

The Wasp and Fly trap will work in outdoor conditions only, do not use indoors.

- Remove the yellow base from the trap.
- Pour approx. 125 ml of lure into the yellow base of the trap and fix the clear top to the base to prevent butterflies from entering the trap.
- Ideally, traps should be hung at head height but if this is not convenient or unsafe, traps can be placed slightly higher up to 2.5m.
- The trap should be placed in close proximity to wasps and away from human activity.

Storage

Store the liquid in a cool, dry place out of direct sunlight for up to 2 years.

Precautions

Handle trap with care, avoiding contact with liquid attractant. Wash hands before and after handling.
